

Service Information on Mobiles of Dealer Technicians

Overview:

Our technicians need to access service data constantly. We want the technicians to be able to quickly have a look at their KPI's.

Current Challenges:

In the process of digitizing our workshop, we are looking for constant improvement and convenience for our technicians. We believe that having all the service information on a mobile with a clear and easy to understand dashboard would be a plus for our technicians.

Business Requirements:

The service has to be app based with a very strong UI/UX so that the technicians are able to quickly access the required information on field. There will be some interface to be performed with our systems to retrieve the data.
